Forecast for Wednesday 30 Nov 2022

Weather: Mist and fog may be quite dense at times overnight with some drizzle in thicker fog or freezing fog patches, and this may be slow to clear during the morning especially lingering around southern areas. An early cloud temperature inversion is possible in the morning. Where the fog does lift we will see some cloud breaks developing and some brighter spells the best chance is towards the west of the Brecon Beacons. Mist and fog is likely to form once again in the evening.

Chance of cloud-free hill tops above 600m: 20% rising to 40%, low cloud and fog will persist for much of the day.

Low cloud and visibility: Broken or extensive layers of cloud above 300m are likely in the morning, it is possible the higher summits will be clear with good view and sunshine at this level. Cloud layers will be slow to lift and clear especially in the north and west but some eastern areas seeing some cloud breaks during the afternoon. Visibility will be poor or very poor in fog and mist patches but will be good beneath cloud layers and also possibly on the higher tops.

Forecast for Thursday 01 Dec 2022

Weather: Cloudy overnight with some patchy drizzle in the east. A dull start with patchy drizzle continuing in the east but brighter further west toward Carreg Cennan with some sunny intervals here. Remaining cloudy in the east but cloud perhaps thinning in the afternoon with one or two brighter spells possible. Cloud thickening with some mist again in the evening.

Maximum wind: Southeasterly 5mph.

Chance of cloud-free hill tops 600m: 20% improving to 40% in the afternoon. Low cloud in association with patchy drizzle.

Low cloud and visibility: Broken or overcast layers above 300m for much of the day, perhaps becoming more scattered in the afternoon in the east of the Brecon Beacons. Visibility quite poor in the morning with drizzle and outbreaks of light rain, good navigation skills will be required at times but generally improving with some good views in the east in the afternoon.

Temperature: **Valleys:** Plus 3 rising to 8 Celsius.
At 600m: Plus 3 Celsius
Freezing level: Above all summits
